Career Objective

I am a B.Tech student in Artificial Intelligence and Data Science with a Diploma in Computer Science Engineering, passionate about computer vision, robotics, and AI. I have worked on projects like face recognition, gesture control, motion detection, and road segmentation, and aim to use my skills to build intelligent and innovative AI systems.

Experience

KIET Robotics Lab Member
Working on Computer Vision Projects
2024-2027(present)

Education

- **KAKINADA INSTITUTE OF ENGINEERING AND TECHNOLOGY (WOMEN'S)**
Diploma – Computer Science Engineering
78.9% – 2021–2024
- **KAKINADA INSTITUTE OF ENGINEERING AND TECHNOLOGY (WOMEN'S)**
B-Tech - Artificial Intelligence and Data Science
76.16% – 2024-2027(Present)

Projects

- **Motion Detector and Alert System**
For the Motion Detector and Alert System, I compared consecutive video frames using OpenCV to detect motion and triggered sound or light alerts.
<https://github.com/Rahitya86/Motion-Detector-and-Alert-System>
- **Live Face Recognition Attendance System**
In the Live Face Recognition Attendance System, I collected face images, extracted descriptors, and used OpenCV with Flask to recognize faces and mark attendance.
https://github.com/Rahitya86/Live_Face_Recognition
- **Gesture-Controlled Virtual Calculator**
In the Gesture-Controlled Virtual Calculator, I tracked hand landmarks with MediaPipe and OpenCV to control a virtual calculator using finger gestures.
https://github.com/Rahitya86/Gesture_control_Calculator
- **Road Segmentation**
In the Road Segmentation project, I trained a DeepLabV3 model on a custom road dataset using PyTorch with cross-entropy and dice loss. The model can segment roads in real-time videos for robotics and autonomous navigation

- **Bad Fruit Detection – Krishi coBot (e-yantra)**
Built an RGB-D vision pipeline using OpenCV to detect spoiled fruits through color segmentation and contour analysis. Computed 3D coordinates using depth data and published TF frames for robotic pick-and-place

- **ArUco Marker Detection – Krishi coBot (e-yantra)**

Implemented ArUco marker detection with pose estimation to localize fertilizer cans accurately in ROS2. Published TF frames and integrated the detections with UR5 robotic arm serving for object manipulation.

Internships & Achievements

- Conducted a 1 Hour session for 240 students about Robotics and Computer Vision

Skills

- Python
- OpenCV
- PyTorch
- TensorFlow
- MediaPipe
- Deep Learning
- Ros2

Tools

- VScode
- Ubuntu
