Career Objective

Motivated and enthusiastic B.Tech student with strong interest in robotics, drones, and AI. Actively building projects using ROS2 and Gazebo, with hands-on experience in autonomous navigation systems. Looking to contribute and grow in dynamic tech environments.

Education

Bachelor of Technology (B.Tech)	Pursuing
Kakinada Institute of Engineering and Technology, Korangi	
Intermediate	8.7
Chaitanya Junior College, Kotananduru	
SSC	9.3
ZP High School, Kusarlapudi	

Technical Skills

- **Programming Languages:** Basic-level knowledge of Python, C++
- **Tools/Frameworks:** ROS2, Gazebo, Rviz

Projects

- **Drone Stabilization in e-Yantra Robotics Competition**
Implemented PID control for stabilizing the Swift Pico drone in a fixed position using pose feedback during competition. Used custom ROS2 messages and real-time simulation in Gazebo.
- **Mapping and Navigation in Gazebo with custom Robot Model**
Developed mapping and autonomous navigation with 2d lidar capabilities for robots in Gazebo simulation using ROS2. Integrated SLAM and path planning techniques to enable efficient robot localization and movement.
- **Contribute to the project of waypoint navigation of GO2W**
Contribute to waypoint navigation of GO2W using 3d lidar (point cloud mapping). Integrated SLAM techniques to generate real-time environment maps and optimized navigation paths for autonomous movement.

Certifications

- Participated in the Microsoft Learn Student Ambassadors program: 6-week workshop on Artificial Intelligence modules, offered by the kiet Robotics Lab
- Certificate of participation in the hackathon conducted by our college

Achievements & Extracurricular Activities

- Self-motivated learner with consistent discipline.
- Participated in e-Yantra Robotics Competition and completed three tasks successfully.
- Participated in a hackathon conducted by our college.
